CHILDREN'S POLLINATOR GARDEN

- **1** Adjust the edge of the path so the entire butterfly is encompassed within the garden. Frame the south edge of the butterfly with a widened gravel zone edged with stone from the original form.
- **2** Pave the perimeter of the butterfly shape (18" wide path) with orange-hued flagstone to improve access and perception of the butterfly shape. Use stone from the original form to add detail to the monarch wings.
- **3** Add a *Garden Introduction* sign that shares the primary theme of the garden. Rename area "Children's Pollinator Garden."
 - Plant low-growing plants within the butterfly form. Plant tall pollinator plants outside the butterfly form.

- Add two tile-topped benches in the same style as the existing bench to create a small gathering area for children's educational programs. If the original bench cannot be moved, adjust the placement of additional benches accordingly.
- 6

5

Incorporate a planting bed to the west and add a solitary bee habitat sculpture that can be monitored by children. (See examples to the right)

7

Create a hands-on interpretive display designed for children to learn about plant-pollinator relationships. (See examples on the following page)

Add or rearrange shrub plantings to reduce the linearity of the hedge to the north.
